

## **Read-Me**

September 29, 11

- indNetwork.do:                   Written by Burak. Computes the individual-level sibling data (assuming all individuals in the connected hhs are connected).
- Ivvars.do:                        Written by Burak. Computes the percentage of individuals in the individual-level sibling network who have migrated and remitted in 1984. Saves sibrem94.do.
- Ivvars2.do:                       Written by Burak. Computes the percentage of remittance receivers for a migrant who live outside the hh.
- Ivvars3.do:                       Written by Filiz. Computes the percentage of migrants in the individual-level sibling network who remit to another hh than their own (thus are likely to remit to the index hh as well).
